

Product Manager

Cruden develops simulators that enable F1 teams to build faster cars and coastguards to be ready to save people from the next big storm. Our simulators are key tools in development of the cars of the future and research for safe and comfortable autonomous transport.

We are looking for a motivated Product Manager to join our team. The successful candidate will be primarily responsible for our marine simulator products.

You will be a member of the Product Development Team, who, like you, are among the best in their field. This Team has people with a mix of competences, such as coders and artists. You will be the product specialist. Together you'll be developing Cruden's next generation of Fast Craft Simulators. The ideal candidate will be motivated, flexible, pragmatic and have a Can Do mentality.

This is a diverse role. You'll need to know your industry and customers, so you'll be traveling to trade-shows, customers, partners and potentials to learn what it is we should be adding to our product and why. You'll speak with engineers, trainers, sailors, marines and then of course with your colleagues, to explain them your new insights. You'll be testing and evaluating third party software and hardware components to see if and how we should interface with them. You'll be working with our simulators hands-on, to see where we are and show that to others as well. All of this knowledge about what's next to be developed should then be forged into epics, features and userstories in our product development management system, Azure DevOps. This way, your team members can start developing the next iteration of our products. You're hosting the sprint demos and signing off features to verify that developments fulfill the customer needs you have identified. Above all, you are the main person to talk to within Cruden when it comes to the Fast Craft Simulators.

About you:

- You have a university degree in engineering;
- You have experience as a Product Manager, Product Owner, or a similar role;
- You have experience in the Marine industry, preferably in a simulation-related field;
- You're someone who enjoys to get the hands dirty and figure stuff out;
- You're someone who easily connects with other people and enjoys building relations;
- You're fluent in English (and preferably also in Dutch).

About us - we'll offer you:

- A representative salary, 25 holidays and a pension plan;
- A highly competent team that can't wait for you to join them;
- The possibility to make an impact in co-creating Cruden's Marine Simulation products;
- An open-minded, small company with a family feel and a flexible attitude.

Do you live in the Netherlands and can you commute to Amsterdam on a daily basis? Do you have what it takes to develop products used by the most demanding people in the business, such as F1 drivers and navy seals? Then we'd love to hear from you!

Please send your application to jobs@cruden.com.

We don't appreciate acquisition in regards to this vacancy.
